RE: Records Request – Agreements, Procurement Documents, and Communications regarding ownership, operation/management responsibilities of the water systems, treatment plants, etc.

Dear Ms. Lipton,

This is to memorialize the phone conversation we had on July 11, 2019. In that phone call, we discussed the focus/intent of your public record request submitted on May 28, 2019. You confirmed the intent of the public record request, was focused on the potential privatization of the water systems currently owned, operated, and managed by the Las Vegas Valley Water District (“District”). On June 04, 2019 the District communicated via e-mail there were no responsive documents in-regards to your topic areas of Agreements and Procurement as related to potential privatization of the water systems.

As explained in the phone conversation, during the period between January 01, 2018 and May 01, 2019 (as per your request) the District’s employees regularly communicated with other water utilities (public and private) on various topics including, but not limited to, water rights, engineering, operational best practices, conservation, water quality, water treatment, and other topics. As your focus was on the topic of privatization, you were not interested in those communications and concluded this matter to be closed.

Sincerely,

Justin Carlson, CIP, IGP
